

# Two-Page Spread Viewing

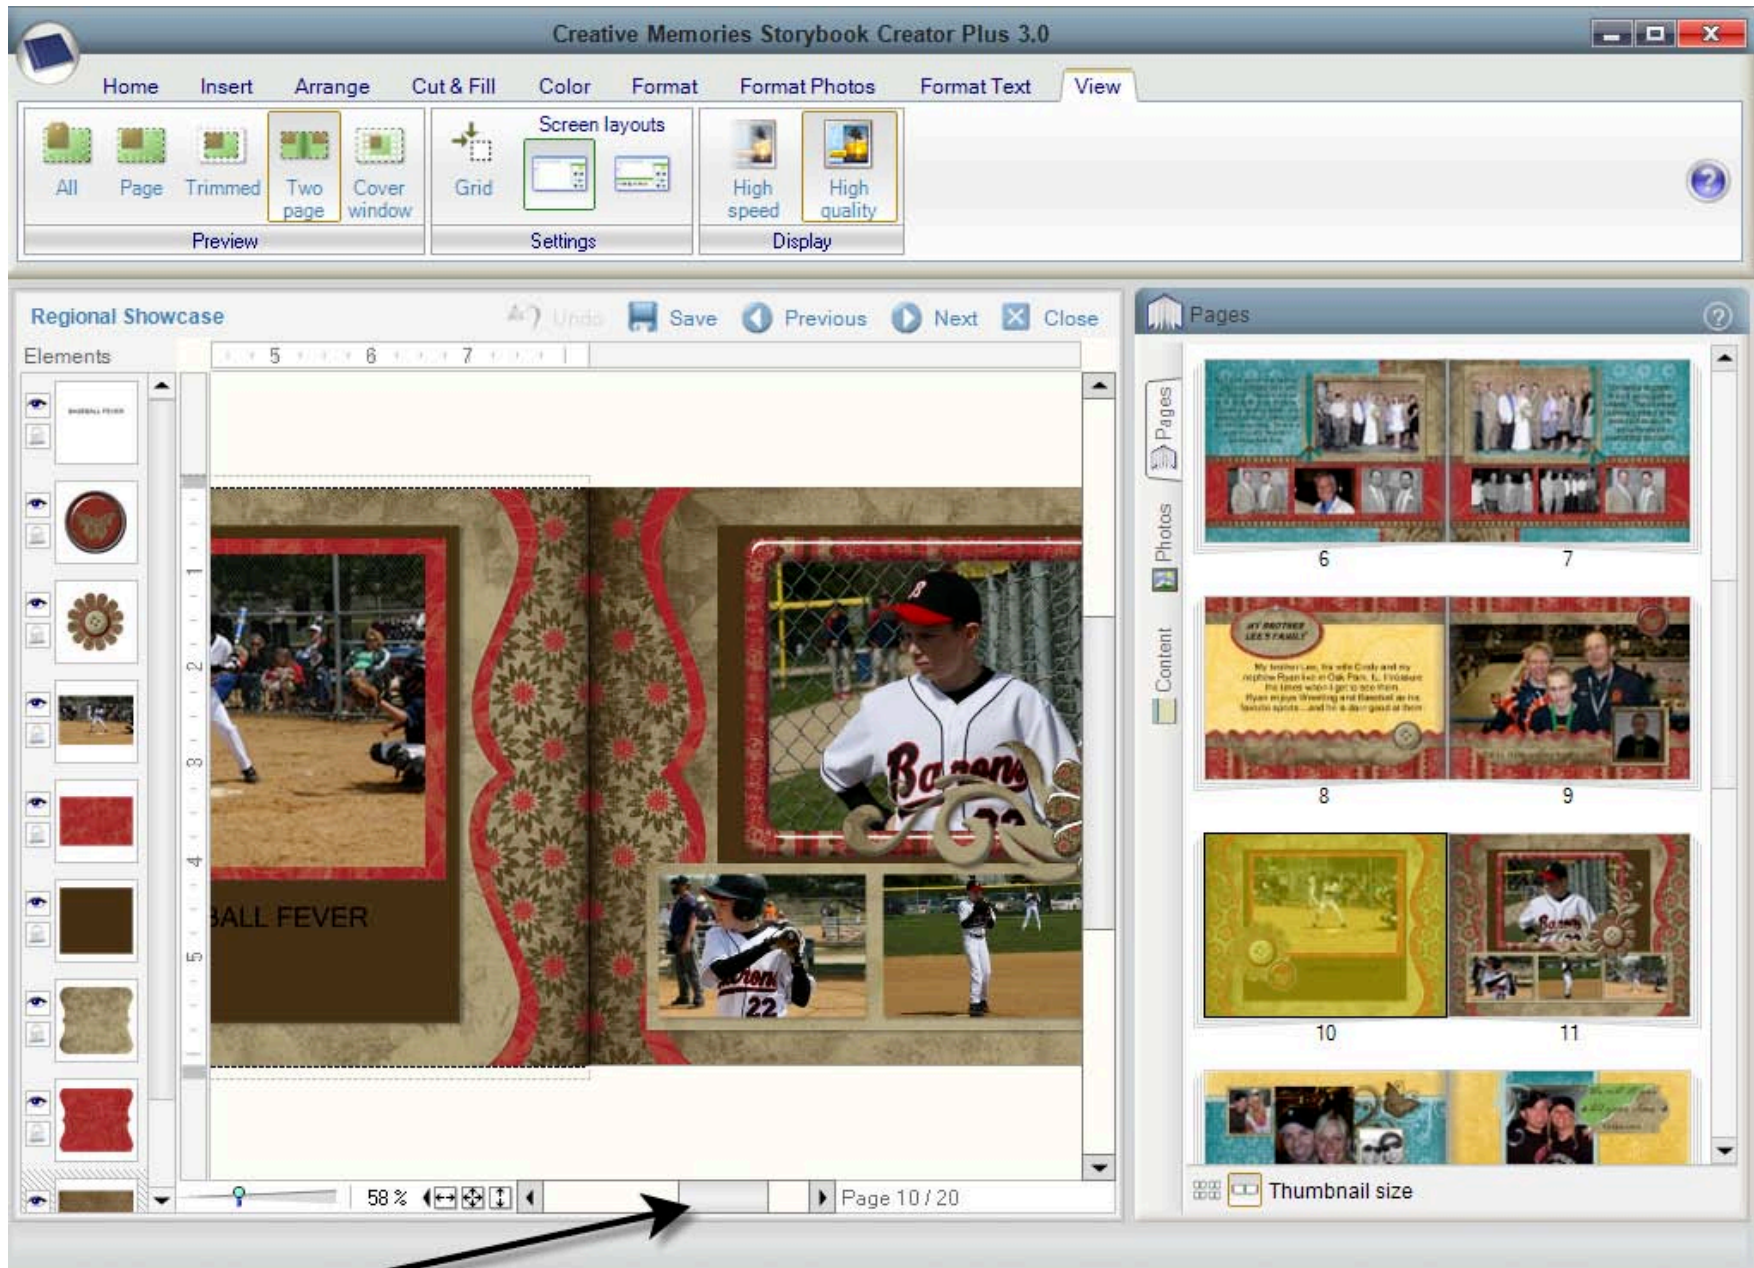

This improved feature allows you to view both sides of your two-page StoryBook at the same time for easier editing and alignment.

To open the two-page view, click on the **Preview** tab and select **Two page**.

This will display both pages of your two-page spread. Using the bottom slider or arrows you're able to see each page. Although you can see both pages, only one page is active for editing at a time.

Edits can be made from this view just like the single-page view. Now you can use rulers or other tools to be sure items are aligned properly across both pages.
